

ReadyMedical is the first line of ready-to-mix sterile products, which are designed to help your skin heal faster and better after any aesthetic treatment.

No matter the treatment you are getting or the condition of your skin, ReadyMedical has got you covered with 4 unique solutions that will help you achieve the best possible results.

## The ReadyMedical Approach

As opposed to other topical products, the active ingredients of ReadyMedical are mixed together with sterile hyaluronic acid right at the moment of application.

## Why is This Important?

IN PRACTICE, IT MEANS THAT:

The active ingredients maintain their full therapeutic power

The active ingredients are more stable and exert a longer effect

The mixed products contain higher concentrations of active ingredients

The ingredients are sterile and safe to use on any type of skin, including open wounds and active lesions.

## WHY HYALURONIC ACID?

Sterile hyaluronic acid (HA) is the base of all ReadyMedical products. HA is a natural healing molecule in our body and the most important hydrator of our skin. Unfortunately, natural production of HA significantly declines with age. We use preservative-free HA in order to:

- Intensively re-hydrate the skin
- Promote more effective healing
- Reduce inflammation and irritation

Carry other active ingredients into the deeper layers of the skin where they are needed

## CLINICALLY PROVEN RESULTS
