FREQUENTLY ASKED QUESTIONS

What is Cryotherapy?

Cryotherapy is the gold standard for removal of skin lesions in dermatology and aesthetic practices. It's the controlled destruction of unwanted tissue through the application of extreme cold.

How long will it take for the lesion to disappear?

Your lesion is expected to fall off 2-4 weeks after the treatment. Some lesions are more persistent and may take longer to disappear.

How does the FreezPen treatment feel?

The treatment is comfortable, and doesn't hurt. It feels like a light pinch. There is no need for local anesthesia.

How soon after the treatment can I return to my daily activity?

Immediately after. FreezPen treatments involve zero downtime.

How many treatments are required?

Most lesions require one treatment. Large lesions, such as warts, may require 1-2 follow up treatments.

Will the FreezPen treatment leave any scars on my skin?

No. FreezPen is a non-invasive treatment. Temporary blistering may occur, but there will be no permanent scars or marks left on your skin.

Distribution in Canada by

DermaSpark | 1.866.237.0849
Products Inc.

Erase dark spots,
skin tags, moles and
other lesions in seconds.

PRECISION CRYOTHERAPY

 Licensed by Health Canada

Made in Belgium

World's Best Non-Invasive Treatment For Removing Benign Skin Lesions

- + Safe
- + Fast
- + Comfortable
- + No downtime
- + No scars

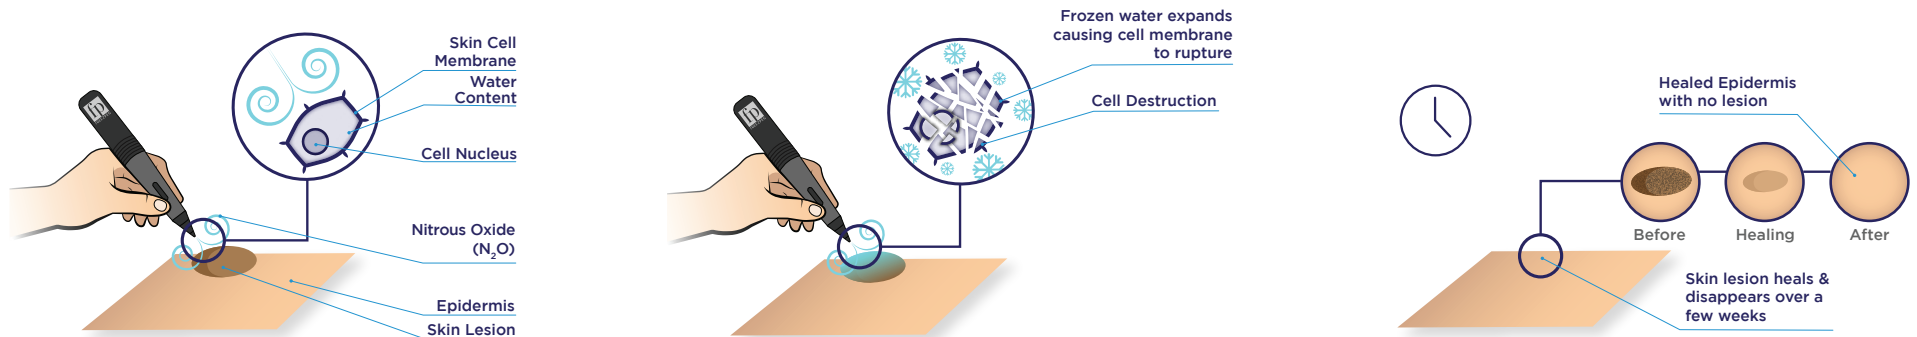

TREATS COMMON LESIONS ON THE FACE AND BODY*

- Dark spots
- Skin tags
- Moles
- Age spots
- Warts
- and more...

*non-malignant

How It Works

1. Rapidly and precisely freeze the unwanted lesion.

2. Water in the lesion cells will freeze, expand and rupture the cell membrane.

3. Targeted lesion cells are destroyed, and the lesion disappears after healing.
